Care of Sedums
Whatcom County Master Gardeners

This container can be outside in the summer and moved inside in the fall.

Outside: place the planter in a location that gets at least six hours of sun daily. Water lightly once a week, considering that some of the containers do not have drain holes. Fertilize with a liquid fertilizer once a year.

Inside: place the container in a bright, indirect sunlit location. Protect surfaces with a plate or plastic as baskets may seep moisture. Do not water unless the soil is very dry.
